FROM PROTOTYPING
Reviewed specification
User feedback and open questions

Define the production change
Refine prototype findings
Add criteria, contracts and quality targets

Checkpoint A: approve the brief
Confirm scope, constraints and risk
Apply organisational approval rules

PREPARE THE WORK
Divide the approved change into tasks

Planning Agent
Divide the change into small, testable tasks
Define task contracts and expected outcomes
Record the ordered plan

IMPLEMENTATION AND TEST PREPARATION
Independent work in parallel

Build Agent
Repeat SCOPE-V for each task
Specify, Constrain, Orchestrate, Prove, Evolve
Verify before, during and after building

Test Designer Agent
Write tests from the approved specification
Without seeing the implementation

VERIFY THE CHANGE
Independent checks against the specification

Verification Agent
Run independently written tests
Check integration and regressions
Report failures back for repair

COMPILE THE EVIDENCE
Traceability for acceptance

Auditing Agent
Link requirements, code and tests
Collect results and remaining findings
Prepare the evidence package

Checkpoint B: accept the change
Citizen developer confirms business fit
Expert review when triggered

TO THE LIFECYCLE
Accepted change and evidence
For later pilot and release decisions
